

The Key to Your Healthcare World.

Nimbus-T has a new patented technology, our Nimbus-Key System, which creates a global identifier then double encrypts and outputs it as a QR code. This is not a normal QR code, your identity information can't be seen with normal QR code readers.

Protection starts here. Furthermore, we place an identity band around it to not confuse it with normal QR codes. This Nimbus-Key manages your other healthcare identities securely. Our technology can provide better authentication and fraud reduction. It can help prevent duplicate medical records, ensure proper patient record matching, ensure proper authentication for telehealth visits, prescriptions, medications, and lab tests.

Nimbus-T has a patented technology

Your Identity Secured On The Blockchain.

We are developing blockchain solutions for healthcare that assist in securing your Nimbus-Key Identity. Distributed ledger technology that will ensure your ownership of your identity preventing identity theft and fraud. Smart contracts on the blockchain to ensure a better and more efficient workflow in transactions such as digital prescriptions, authentication, signatures, permissions.

We plan on launching a NT token in 2019 that will revolutionize payments in healthcare. Peer to peer payments that will cut out 40% of the waste in existing systems.
